Since 2000, he have been researching on the development of agriculture in Iran and in the Asian continent in a specialized way and in a survey and field

Procedures

In the theoretical view, more than twenty strategies including mechanization, agrarian reforms, green revolution, agriculture and industries have failed. In my opinion, the only way to advance agriculture and provide food security as well as environmental sustainability is to realize the solutions of this strategy finally the theory of “agricultural intensification based on family” is unique and special.

In the field of labor and employment demography, in addition to the evaluation of general population and housing censuses and scientific mastery of various rates and formulas for calculating activity and employment, he has been active in the implementation of training and employment programs for local communities.

Ebrahimpour has been managing and having specialized responsibility for many years and is an active member in more than 30 institutions and specialized councils. Also, he is active in promotional and specialized programs in radio, television and media.
